Attn: Kurt Kalina

Re: Eielson CH&PP Baghouse Study

Design Alaska has worked with CMM/Schmidt on the Eielson CH&PP Baghouse Study, located on Eielson Air Force Base, AK. The project was to propose various means to meet particulate emission requirements at the base power plant after they received a notice of violation from the Alaska Department of Environmental Conservation for exceeding the permitted opacity limits.

CMM/Schmidt assisted Design Alaska in creating recommendations and solutions for responding to the violation. They performed in depth investigations and were able to come up with multiple options for the Alaska District of the Corp of Engineers and the Air Force.

Our client was extremely satisfied with our work. We received the highest rating of "Exceptional" in their review after project completion. This high rating was due in large part to the work of CMM/Schmidt and their ability to think beyond the constraints of doing this work in an Arctic environment.

In our review it was stated that, "Design Alaska did an exceptional job with the coal-fired power plant baghouse study. They gathered industry expertise in a difficult area and provided a superb document we were able to use in consultation with the State of Alaska Department of Environmental Conservation."

Design Alaska could not have reached this exceptional rating without the technical guidance of CMM/Schmidt. Design Alaska was extremely satisfied with the working relationship and would work with CMM/Schmidt again if the opportunity arises. We will be keeping an eye out for opportunities to team again.

If you need any further information or details from this project, or any future work feel free to contact Chris Miller, PE chrism@designalaska.com 907-452-1241 for more information.

Sincerely,

Design Alaska, Inc.
